DETAILED ACTION

Information Disclosure Statement

1. The Examiner acknowledges receipt of the international Search Report for PCT application PCT/03/40291 submitted February 28, 2007. Said search report is considered to fulfill the requirement for a concise explanation of the relevance of EPO Patent Document No. 0 005 676 A2. Accordingly, the Examiner has considered EPO Patent Document No. 0 005 676 A2 listed on the Form 1449 submitted January 4, 2005. A copy of the completed PTO Form 1449 is attached to this Office action. The previously considered references listed on the PTO Form 1449 have been lined through and the citation of EPO Patent Document No. 0 005 676 A2 has been initialed by the Examiner.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1 to 4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to

Art Unit: 1742

one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

I. The claim language;

applying a train of said m-phase systems of alternating currents in a superwave pattern to excite said helically traveling magnetic fields, a cluster of intensified energy pulses being superimposed on each m-phase system of alternating currents with a certain periodically repeated duration in time, wherein each pulse in the cluster of pulses has an amplitude that is proportional to an instantaneous amplitude of a major wave associated with the train of m-phase systems of alternating currents, and wherein each pulse in the cluster of pulses has a frequency that is proportional to an instantaneous frequency of the major wave associated with the train of m-phase systems of alternating currents (claim 1, second paragraph)

does not find support in the application as filed. Applicants refer to page 11, line 24 to page 13, line 28 as support for this new claim language. The Examiner does not agree. The section of the specification cited by applicants for this new claim language does not recite the above quoted new claim limitations and thus does not support the new claim language.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1742
